

The Power of Prayer on Plants

Selected photos from the Book

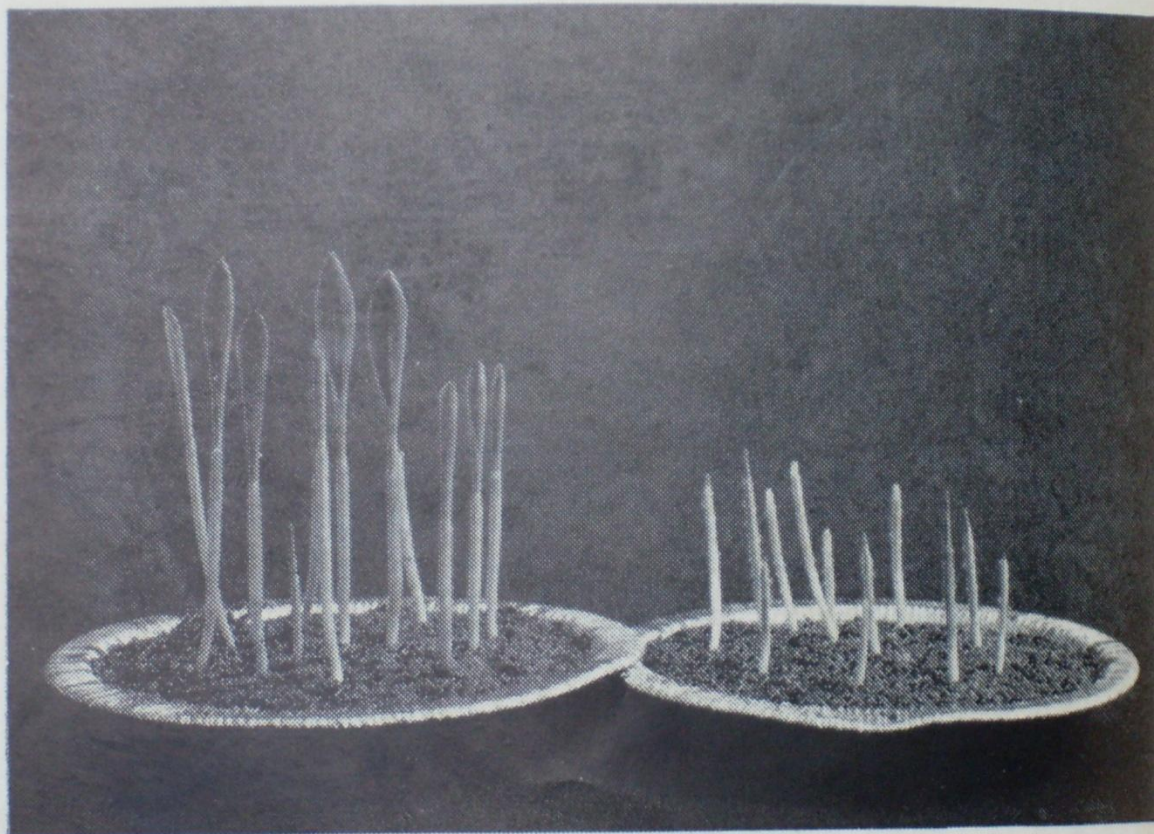

Does prayer affect plant seeds?

In a study on germinating seeds done by Dr. Franklin Loehr, a Presbyterian minister and scientist, the objective was to see in a controlled experiment what effect prayer had over living and seemingly non-living matter. In one experiment they took three pans of various types of seeds. One was the control pan. One pan received positive prayer, and the other received negative prayer. Time after time, the results indicated that prayer helped speed germination and produced more vigorous plants. Prayers of negation actually halted germination in some plants and suppressed growth in others.

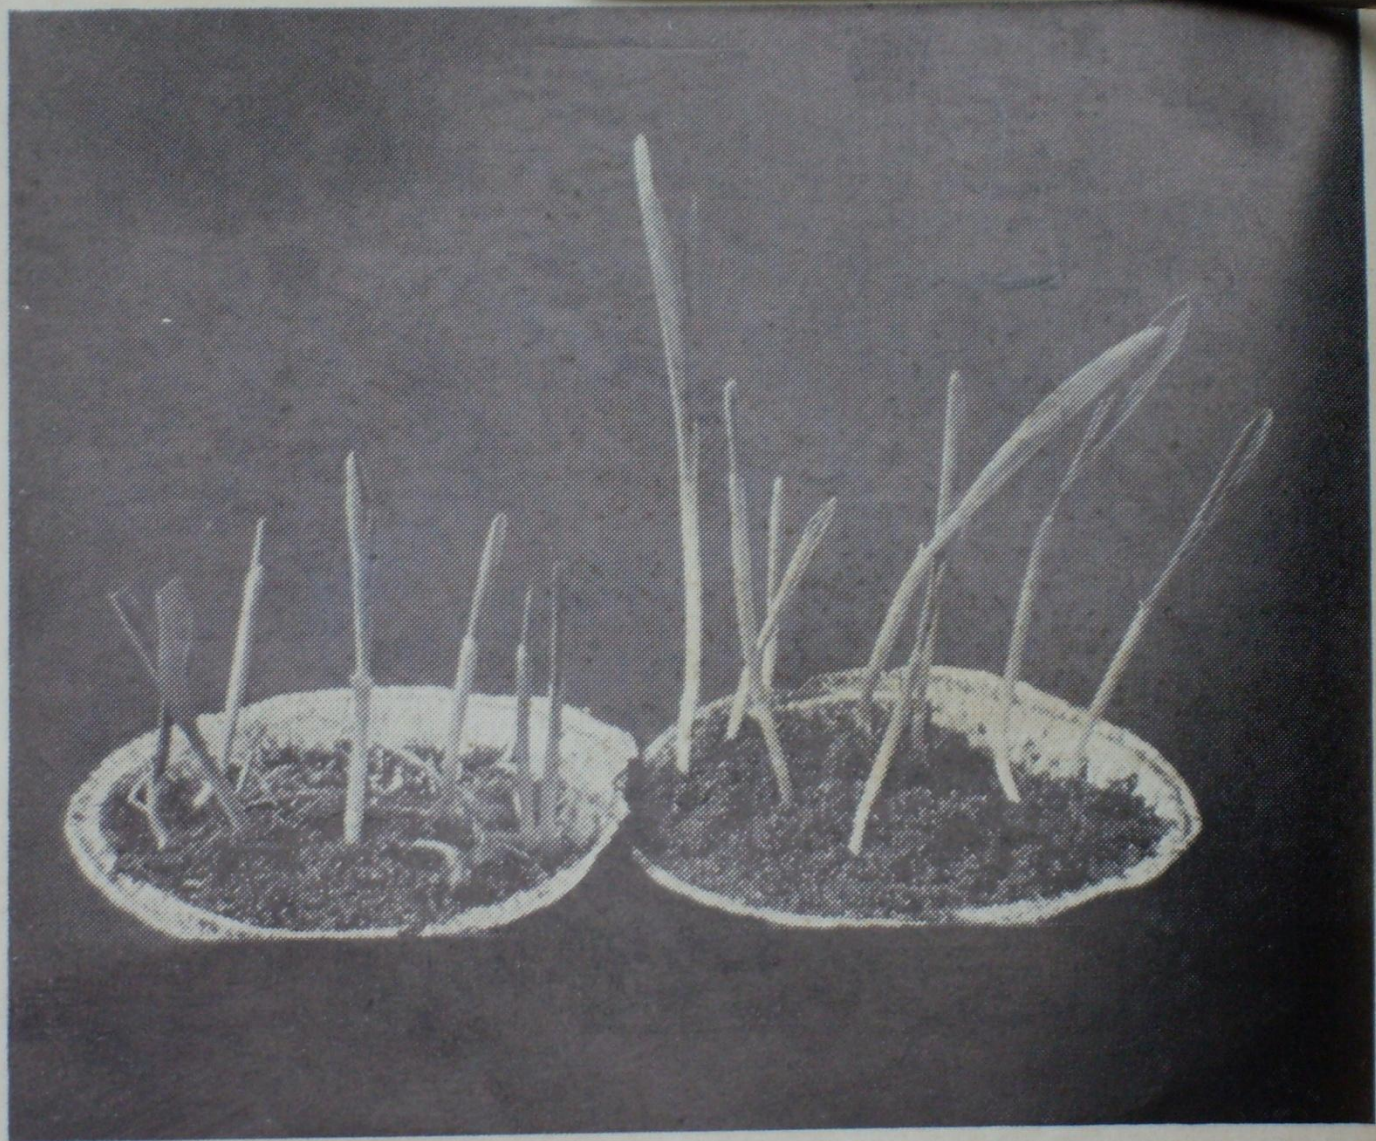

- In another experiment two bottles of spring water were purchased. One container was used as a control, receiving no prayer; a group prayed for the second. The water was then used on pans of corn seeds layered in cotton, with one pan receiving the prayer water and the other receiving the control water. The pan receiving the prayer water sprouted a day earlier than seeds in the other pan. The prayer seeds had a higher germination and growth rate. The experiment was repeated with the same result each time.

Quantum Entanglement and the Power of Thought

Quantum entanglement is the ability of two particles to be connected even when they are physically apart. It is what Einstein describes as the "spooky" effect exerted by particles upon each other even when they are separated. A feature of quantum physics, this connection has also been demonstrated in human relationships.

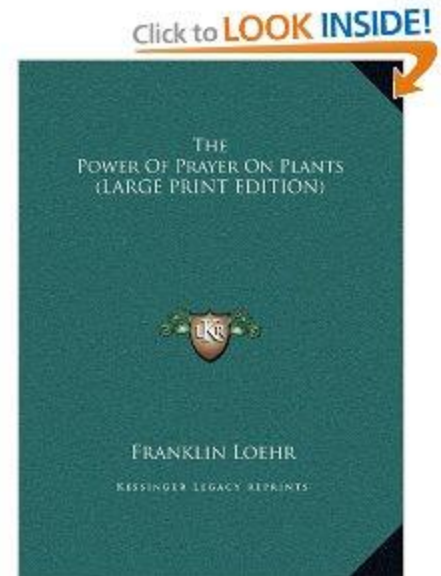

- The power of intention and prayer is also demonstrated in an experiment conducted at McGill University under the direction to Professor Bernard Grad. According to Lynne McTaggart, this experiment shows that plants watered by a healer who had a passion for plants fared considerably better than those watered by a depressed psychotic. When researchers examined the water used by these two subjects, they found that the water conditioned by positive intention from the healer was substantially different in its molecular structure than water used without positive intent by the depressed psychotic. Somehow the belief systems of these two men have changed the profile of the material world.
